EDUCATION

University of Toronto

Toronto, ON

Honours Bachelor of Science in Computer Science

- Technical Director at African Student Association
- Relevant Coursework: **Software Engineering, Web Development, Databases, Data Structures and Algorithms, Algorithm Design and Analysis**

SKILLS SUMMARY

Languages: TypeScript, JavaScript, Python, HTML/CSS, Java, Bash, SQL

Frameworks and Libraries: ReactJS, Angular, NodeJs, Flutter, Express, FastAPI, JUnit

Databases: PostgreSQL, Firebase, MongoDB, AWS S3, Neo4js

Tools: GIT, Docker, Azure, GitHub, Agile, Google Cloud Platform, Postman, Jira, Figma

AI / LLM: Azure AI Foundry, LangChain, Google Gemini, Ollama, RAG Pipelines, Ultralytics YOLO, Generative AI

EXPERIENCE

Software Engineer Intern

Toronto, Canada

Foresters Financial

May 2025 – Aug. 2025

- Owned end-to-end delivery of an AI-driven **Microsoft Teams** agent using **Azure AI Foundry, Microsoft Bot Framework**, and **TypeScript** — designing prompts and workflows that enabled real-time querying and analysis of defect reports, measurably improving developer productivity and cross-team decision-making.
- Reduced manual QA effort by **5+ hours per week (200+ hours annually)** by designing and implementing an automated regression and integration test suite using **JavaScript** and **Playwright**, delivering production-quality test coverage and improving release reliability in an Agile sprint cycle.

Software Engineer Intern

Toronto, Canada

ElleSante

Jan. 2025 – Oct. 2025

- Accelerated front-end feature delivery by **~25%** by architecting a scalable web interface using **React** and Mantine UI, taking full ownership of component architecture and state management to ship high-quality, production-ready code in a fast-paced Agile environment.
- Reduced UI regression defects by an estimated **30–40%** by writing and maintaining unit tests for **Flutter widgets**, covering edge cases and interaction states — contributing to an automated testing strategy that improved release stability across sprints.
- Reduced feature UI development time by **~30%** by owning the design and delivery of reusable, modular **Flutter (Dart)** components documented in Widgetbook, improving cross-team design review efficiency and UI consistency.

PROJECTS

AI Resume Tailor | *Python, FastAPI, LangChain, Google Gemini, Ollama, Angular, RAG, GitHub*

- Designed and built an end-to-end AI-powered application using a **RAG pipeline** (LangChain, **Google Gemini, Ollama**) to tailor resume bullets and generate cover letters from job descriptions — engineering prompts and retrieval workflows to produce accurate, context-aware outputs.
- Architected a dual-LLM backend with **FastAPI** supporting both cloud (Gemini) and local (Ollama) inference, enabling flexible, privacy-conscious deployment with consistent output quality across providers.
- Built a multi-page **Angular** frontend to surface AI-generated outputs, creating a lightweight internal tool that demonstrated how AI agents can meaningfully improve developer and knowledge-worker productivity.

Quotis | *React Native, TypeScript, Node.js, Express, AWS S3, MongoDB, GitHub*

- Led a team of **5** to ship a full-stack, cross-platform mobile application (**React Native, TypeScript**), owning the **Node.js/Express.js** backend and designing scalable **RESTful APIs** for authentication, job postings, reviews, and provider matching.
- Designed **MongoDB** schemas to model complex relational data across users, job posts, and reviews, and implemented secure media storage using **AWS S3**, ensuring well-organized and scalable data retrieval.
- Participated in code reviews and technical design discussions throughout the sprint cycle, contributing to production-quality standards and team-wide accountability for delivery.
